How to read this

You want this team to win

You want this team to lose

Head-to-head with Notre Dame

Darker = higher leverage · "@" = on the road · % = their chance of winning (SP+) Notre Dame's own row is shaded by its chance of winning each game.

WHAT LEVERAGE MEANS

**Impact** is how much Notre Dame's playoff odds move between the two possible results of a game. A game can matter for three reasons: the loser drops behind you in the rankings, a conference title (and its automatic bid) changes hands, or a team on your schedule gets a better or worse record, which changes how much your result against them counts.

**Leverage** is impact discounted by how unlikely the swing is. A coin flip keeps all of its impact; a game where the favourite wins 95% of the time keeps about a fifth, because the upset you'd need rarely happens.

Both are scaled 0–100 against the biggest game left on the schedule. Every number comes from playing out the rest of the season 10,000 times and flipping each game one at a time to see whether Notre Dame still makes the field.

Field = ACC, Big Ten, Big 12 and SEC champions plus the highest-ranked Group of Six champion, then the seven highest-ranked teams remaining; straight seeding. Win probabilities from the SP+ rating gap with home advantage; final ordering is a strength-plus-résumé stand-in for the committee.
